

7.1 AI Disclosure

Participants must disclose AI tools or services used during project development in the required submission/declaration format.

AI DISCLOSURE FIELD	DETAIL TO PROVIDE
Team Name	Code with Errors
AI Tool / Service	Cursor — development and building the judge presentation as a website; ChatGPT — general assistance; Perplexity — research
Team Member(s) Using It	Naga Shreeshyl K S only
Purpose	Research / Coding / Debugging
Brief Description	AI tools were used only by Naga Shreeshyl K S to support research, coding, and debugging while building Nexus Logistics (JP-019). Cursor assisted with application development and implementing the interactive presentation as a website. ChatGPT was used for general assistance. Perplexity was used for research. All AI-assisted output was reviewed and validated by the team before use. No generative AI is used at runtime to invent delivery routes. Route planning is Google OR-Tools (CVRPTW) under hard capacity and time windows; late-delivery risk is classical ML (scikit-learn). Hard constraints are never relaxed by an LLM.
